

7th High Level Dialogue Meeting
Of the China-Europe Water Platform (CEWP)

TECHNICAL VISIT PROGRAMME

9th of November, Morning

08:30h

Departure from the hotel

08:45

Visit to the Guimarães Retention Basin System

09:30

Visit to Santa Eufémia de Prazins Water Treatment Plant (WTP)

10:50h – 11:20h

Visit to Ave river basin - confluence of Vizela river with Ave river

Location integrated in the “Ave Valley Industry Route”.

It is possible to see the confluence of the Vizela River with the Ave River, as well as the wastewater drainage system that integrates the respective depollution system.

11:45h

Visit to the Serzedelo Waste Water Treatment Plant (WWTP)

Domestic and industrial wastewater treatment unit, which integrates the multi-municipal water supply and sanitation system in northern Portugal and it is located in the municipality of Guimarães.

This infrastructure consists of two facilities, which work together, having a tertiary level treatment process, by activated sludge in a prolonged aeration regime:

- Phase I, built in 1997, with piston flow reactors
- Phase II, built in 2008, with oxidation ditches

12:45h

End of the visit to Serzedelo Waste Water Treatment Plant (WWTP)

13:00

Arrival to Guimarães
